

How to receive trunked digital ?

Posted by Art - 11 Oct 2010 18:48

How do I get it to receive Trunked Digital ?

It's scanning the local freq's and receiving all the old stuff, but not the new Digital that Kennewick WA went to last month ?

Refresh your database tomorrow morning and that system should show up.

It seems I'm having the same problem also. I'm receiving all the local freq's but not the digital trunking that Louisville/Jefferson County went to last June. Do I need to change antenna?

This morning, we rolled out a new dB that includes about 6000 improvements to location tagging. Additionally, [that specific system](#) received updates last week that should have resulted in better autoselection.

I do note that quite a few channels on that system are encrypted.

First step, though, is to update the database in your HP-1.

I don't know. Is the system / department(s) loaded when you enter your zip code? What zip code are you using? Does it pause on the system but you just never hear anything on it?
