

Sentinel removing TDMA Talkgroups

Posted by mikeoxlong - 03 May 2014 15:39

First of all, I realize that the HP-1 does not support TDMA.

I have a local system that is using dynamic TDMA talkgroups.

Since Sentinel deletes the talkgroups marked as TDMA, I cannot listen to them when they are operating in FDMA mode.

Sentinel does not remove NXDN and D-Star talkgroups which are not decodable so I'm not sure why TDMA talkgroups are being removed?

As of last week, TDMA talkgroups are included in the database, Ferris.
