

Firmware update

Posted by NS3K - 03 May 2014 20:39

I am trying to update the firmware on a friends 536. I connect the cable and the program finds the scanner. The problem is the upgrade will not take effect. Not sure what is going on. I've also read the scanner to the software with no problem, but the favorites that are listed in the upload I cannot find on the scanner. Any help would be appreciated before I return the scanner to my friend to send back to Uniden.

Jim

The newest firmware version I have now is: 1.09.02

Correct. That update was just released on the 28th of October..... after my last post.

Sentinel was also updated on that same date.

Since I don't spend as much time as I should on RadioReference forums, etc.; I do wish there was duplicate information on this site... or maybe I'm just running behind. (wouldn't be surprised) LOL

Some kind of crap posting was on here last night; had a bunch of web addresses that didn't make any sense.

So I take it there isn't a firmware update released for the 536?

So I take it there isn't a firmware update released for the 536?

There has been a firmware update available through Sentinel to enable Provoice reception capabilities on the 436 and 536 scanners. UPMAN has also released a downloadable BETA firmware (not available through Sentinel yet) to enable DMR reception capabilities on those same scanners.

Note that those updates only give your scanner the capability of having those 2 new reception formats added. You will need to purchase a \$50 digital key from Uniden to activate each of those newly available reception modes if you wish to use them.

.
