

Firmware Update 2.06

Posted by joe42353 - 05 Feb 2018 02:09

I just did a search on the software for a firmware update and it updated the Home Patrol 1 to 2.06. I cant find a changelog for what is new in that version. Does anybody know?

The 2.06.06 version was released publically through the Sentinel update process well over a year ago, and it was released as a beta more than 3 years ago.

The changes were minor (general performance improvements), and that note was posted at that time to the changelog on the Home Patrol site here:

info.uniden.com/twiki/bin/view/HomePatrol/HomePatrolUpdates

.

Thanks for the answer. I usually do not look for Firmware updates since they are so few. I just happen to give it a shot last night. Since our area has gone to about 80% encrypted, I done listen to the scanner near as much as before.
