I bought the ARC Patrol beta and it is just about the best \$20.00 I have spent. Got all my ham repeaters, frs, murs, cb and other local freqs in a favorites list. Also with the auto-fill I can search between any two frequencys I want at whatever step I want. And best yet I will get the finished product when it is released. No problems at all.

THANKS! Gommert.

Denis, KD4RFZ

The P25 nac problem is now fixed. Latest in now 0.9 build 5. I started to write the manual and after that we should have a demo available.

Another major change is the 'Edit favorites configuration'. You can now edit favorite names and re-order them. Please backup your HP1 using the backup options in ARC-PATROL before making any changes.

&quot;save&quot; does in fact save the hpd file. However even with v0.9b5 continues to give WARN message that file is not saved when it has in fact been saved.

Gommert,

One issue I have encountered is trying to delete a group. If I highlight it and right click on it and select delete I get an error message, then the program shuts down with out saving any changes I had made. Hopefully you can get this fixed. Thanks again.

Denis

Just received my HP-1 and ARC Patrol this week .. both are fantastic. The ARC Patrol lets me correct all those typos, odd talkgroup Descriptions from RR database pretty easy.

I too had that error message described above about not saving, but it did save.

So far so good, but I'm having a problem due to trying to keep things compact. I'm running the Arc-Patrol software on an enano elf netbook with a 7&quot; screen with an 840 x 480 resolution. I'm missing the two and a half icons on the right. Are these icons' functions duplicated in the menu?

On a side note I received the ad for this netbook a day or two after I ordered the HomePatrol. The strange thing was that I hadn't received a single email from this company other than acknowledging an order I placed in 2006. And they were selling the netbook for the irresistible price of \$149!

Thanks,

Mark
