Sorry, subtones is different in ARC PATROL. If the SQ Mode cell is blank or none and you save the file then sub tone info is automatically deleted.

But until you save an reopen the file the subtones are not deleted.

When is the next build?

I looked here, but still showing 1.0.

You are probably still running the beta, use this link to download V1.0: [www.butel.nl/download\\_hp1.html](http://www.butel.nl/download_hp1.html)

No eta on the next build.

I am having an issue with a Motorola splinter 800 mhz trunking system in the ARC Patrol. I create a favorite list with a "splinter" tag from the RRDB but when I upload the favorite list to the radio, it only shows a Motorola "standard" system even though I have selected "splinter" in the site settings "Mot Bandplan."

I am near the Mexican border - which is why we use a splinter system.

No favorites work with my local system, presumably because I can't tell the radio the proper band plan to use.
