I am having an issue with a Motorola splinter 800 mhz trunking system in the ARC Patrol. I create a favorite list with a "splinter" tag from the RRDB but when I upload the favorite list to the radio, it only shows a Motorola "standard" system even though I have selected "splinter" in the site settings "Mot Bandplan."

I am near the Mexican border - which is why we use a splinter system.

No favorites work with my local system, presumably because I can't tell the radio the proper band plan to use.

See my email, we found the problem and will be fixed in next build.

I see this was a problem awhile back. Any ETA on the next build? I have everything ready go in ARC PATROL to upload a system just the way I want it....but can't because it's a Splinter system and that selection won't hold when I upload it via ARC PATROL. Please, fix this for us?

Thank you!

Laura

I gave you an ETA per email, the new build with splinter support was released last week.

Gommert:

Downloaded and works perfectly! Thank you so much for your hard work and outstanding software.

Can you tell me the latest version #? My software says there is is new version available, but nothing seems to download. I have version 2.0 build 4.

Thanks,

Jim

Nevermind. I figured it out after send key.

Thanks,

Jim
