

Question on '&' and ',' in the Alpha Tag field...

Posted by b52hbuff - 30 Oct 2010 21:12

I want to insert an ampersand and a comma in the description field.

The & seems to want to truncate at 16 characters.

Comma doesn't appear to be a supported character.

Both of these are legal from RR.com imports.

Comma is a reserved character in ARC PATROL, use ; instead.

I have to look into the & character.

Thanks. Please consider implementing an escape sequence, since this isn't a reserved character at rr.com. So it will be possible to import this character, and I'm not sure what will happen once the character is input into A-P.
