

Going Digital

Posted by Mattcop30 - 05 Mar 2011 17:28

I just received my Homepatrol scanner yesterday. I had to upgrade due to my local police department going digital. I have a question.

When I enter my zip code, it pulls up all available frequencies in my area. The Police Department frequency is listed as "analog" and I am unable to hear the transmissions. When I go to the advanced menu/maunal frequency entry, I enter the frequency and am able to hear the communications. Is there a way to make the band upon entering zip code available to pick up digital communications? Or, is there a way to make a favorits list to include the digital frequency for my local police department? Thanks!

Matt
