

Illegal voltage message

Posted by Docwatson431 - 28 Jun 2011 09:38

This morning while listening to the HP the HP shut down on it's own and then restarted and displayed the message illegal voltage. It then restarted and worked as normal for about 5 mins and restarted again and displayed illegal voltage message again. I checked the power supply and it seems to be working fine and appears to be charging the batteries. Anybody else had this problem?
