

## Extreme Update / Upgrade Now Available for Install

Posted by UPMAN - 15 Aug 2011 11:36

---

See the latest [Blog Entry](#) .

Everyone should apply these updates, even if you didn't purchase the Extreme features. The update incorporates additional fixes and features supplied for free.

Nice job...waiting for the smoke to clear, having fun with new features

Need to change the little firmware badge on the home page..

Still says 1.03

UP Man: Question: If I want to create a new

service in the Custom 1-8, how do I do this?

I want to create a CB group and an FRS group,

both of which are not geographical in nature.

Can you advise me, please.

DUKE WB9OJD

When I emailed back my correct ESN I was told I would get an email when the tech updated my account and there would be a link to my corrected key for my upgrade. I've never received an email and my

account still shows the incorrect ESN. Any Idea when I will get my correct key so I can complete my upgrade?

**hutch67 wrote:**

will you reset my account the esn number dosent match and key doesnt work

You will have to tell them the ESN number from your scanner.

The 1st thing you have to do it install the latest sentenal programming software, then if you have not bought the extream software you must do that or the new upgrade will not work the as soon as they approve you data you will get a key, again based on the serial number you provided to uniden the serial number is on the back you will give them that number, also the &quot; Z &quot; will turn into the number 260 don't worry it will not matter as much as the final date, when you provide your c card number they will issue with a new and long number this is you software key, it's the one that will turn on the &quot; Magic &quot; long number The next step if when you get the number save print and highlight by dragging your mouse over that group of numbers, the for the sake of ease copy it to your notepad, paste that number onto a new notepad then save it or rename it homepatrol activation number so you know what you named it, anything you wish!!!! after you download the extream software hook your cable to the scanner, then do the firmware update first, then do the software update thats the extream one,,,,, install that data in your scanner,,, next after that when all the hard upgrade is done, remove the cable, wait for the scanner to reboot on its own, then see if all the stuff we have been drooling over, here is the real deal comes into play,,, in this order push menu, and wait, next push Advanced menu, then Advanced option, push ,Register Advanced, push that, I know, but we only have just a few more things to do,,,NOW ENTER THAT BIG LONG number, you will know it, if you made a mistake because the software will let you know about it. THEN you are finished and then,,,, Happy Scanning and enjoy the best of the best scanner on earth!!!!!!
