

Run-Rime Error 339

Posted by mswells - 22 Aug 2011 22:03

I am trying to use the virtual control in Windows 7, and am getting Run-Rime Error 339.

"Component 'mscomm32.ocx' or one of its dependancies not correctly registered. A file is missing or invalid";

I tried regsrv32 mscomm32.ocx and still cant run virtual control.:(

I figured out what was wrong. If anyone else cant get virtual control to work in windows 7..you need to make sure you have the MSCOMM32.OCX file, in your windows\system32 directory, and also your windows\sysWOW64 folder. Also make sure to register the file by typing the command regsrv32 MSCOMM32.OCX in a command prompt in that directory.:)

Oepst,that ocx was missing in the initial installer, I just uploaded a new installer that will correctly register this module.

I have V2 running fine on Vista Ultimate 32. Have not tried VC. Do you suppose I will need to do anything if I attempt VC in the future?

Thanks again for your work,

Rob

If you get the error then you need to re-install, else you are all set.
