

MECA

Posted by John - 08 Sep 2011 17:24

RR recently went and removed some of the "T" channels from MECA but I suggest you keep them as they ARE still active channels. Also note a few additions that are used to patch system 2 users to system 1, Been hearing these for a few weeks now and just realized tonight what they were used for, those ID's are

0020

0021

0022

0023 INDYGO to System 1

0024 Probably IPL to System 1

0025

On the above I have seen various patches to IMPD, IFD and various Marion county units. 0023 I have only heard IndyGo use to talk to dispatchers on System 1, usually wanting to know about traffic tieups or detours. On 0024 I am assuming that it's IPL as he told dispatch the pole was too long to make the turn. An IMPD dispatcher replied they would try to find him an alternate way down the street.
