

Dim backlight BCD436HP

Posted by K7LTF - 03 Aug 2016 14:39

Bought the BCD436 from HRO yesterday - understand there are some complaints floating around about the backlight being dim - at full brightness level. Wonder if Uniden has found a source for brighter LEDs, or is this something that i should live with? - Have they gotten the new LEDs It seems dim to me even on full brightness level.

As a side note - I have also read on the net there were some radios with serials that were recalled. Does someone know what the leading numbers were, that are, or were affected?

Thanks Zach
