

## Unbelievable Reception

Posted by admin - 18 Jun 2010 12:21

---

The receiver in HomePatrol is UNBELIEVABLE! The reception, particularly on UHF (which is by far the most used band in the Boston area) is beyond belief, without a doubt the best I've ever experienced on any scanner

Dang, I had to dig for sofa change just to pay for my one and only HP-1. At least now I don't feel so bad that I ordered accessories I could have lived without.

I had an unexpected deal come along, one of those things that will make enough to get a second HP-1 so thats what I'll do. Can't complain when you spend \$100 and make 6 x that :)

I am still amazed by the HP-1 reception. This morning there is heavy fog covering the entire central part of the state, but I am still hearing Ft Wayne on VHF 60 miles away. Even 800Mhz is doing great through the fog as I heard Dearborn Co. for the first time on SAFET while sitting at home. You just can't beat the HP-1 for it's reception. This thing even recives 800Mhz without an antenna, just a BNC 90 degree elbow on it works!

Last night was pretty good for reception into Toronto from Western New York.

I was pulling in counties from Cattaraugus to Monroe. Using a KS3-SMA Micro Magnet Mobile Scanner Antenna With SMA Style Connector. Spencerport NOAA was coming in clear and I even decoded Monroe County - Towns North P25 signal.

Awesome.:cheer:

Thanks for all your help.... I am a fantastic Photographer(Ive been told)

but radio and monitors I know nothing... I have two cars, one a Jeep I must use for my News Work and need the best antenna possible covering all the vaious frequencies as I travel most of the time in California, Nevada and Arizona for a national news agency.... I have heard so many things I am almost lost on what is mybest bet...suggestion please... yes the reception with my little rubber antenna that is supplied, is fair, but I am afraid it will not do for my long range travels....thanks millions for your help.....)

For those of you that are picking up distant signals, how are you picking them up if the Home Patrol only allows for a 30 mile range? Does it have those distant signals' frequencies already loaded when you input your zip code or are you manually entering these frequencies?

I'm thinking of purchasing this but was worried about the "30 mile range" mentioned in the owner's manual pdf. My 50-channel scanner purchased in the mid 90s can pick up signals further away than 30 miles quite frequently.

Thanks for any input!
